PRIZM GAMING™ 2.0

PRIZM GAMING™ 2.0 LENS TECHNOLOGY IS MORE THAN JUST A BLUE LIGHT FILTERING LENS TECHNOLOGY.

Designed for gamers and uniquely developed for OLED & LED displays, Oakley's proprietary Prizm Gaming™ 2.0 Lens delivers enhanced comfort. It reduces blue light with minimal color shift while reducing glare from screens and providing sharp visual acuity.

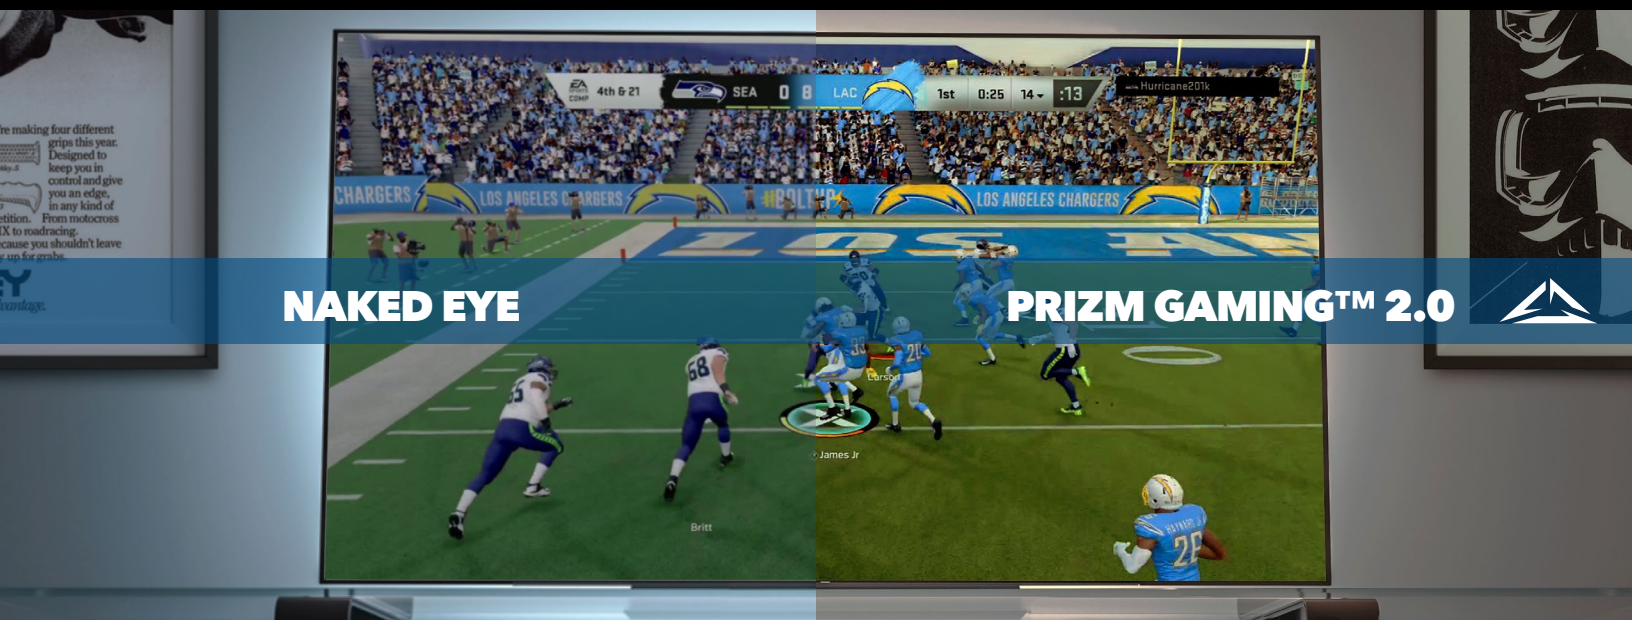

Optimized to attenuate light from OLED and LED screens to reduce blue light exposure emitted from the newest of screens, it helps eyes stay comfortable during long gaming sessions and it is engineered with specific Oakley lens designs that help you see more clearly.

Regarding its Blue Light filtering properties, Prizm Gaming™ 2.0 filters 30% LED blue light (400-500nm).

THE RESULT

Prizm Gaming™ 2.0 has a reduced yellow tint in comparison to the original Prizm Gaming™ lenses for an aesthetically pleasing look for everyday wear. It also reduces 30% of LED blue light within the 400-500nm range and the performance for OLED screens is drastically better while reducing the yellow tint. This is because Prizm Gaming™ 2.0 was uniquely developed for OLED displays to reduce luminescence from screens and provide sharp visual perception.
